- 19 03 05 stabilised wastes other than those mentioned in 19 03 04

⁹ Stabilisation processes change the dangerousness of the constituents in the waste and thus transform hazardous waste into non hazardous waste. Solidification processes only change the physical state of the waste (e.g. liquid into solid) by using additives without changing the chemical properties of the waste.

¹⁰ A waste is considered as partly stabilised if after the stabilisation process dangerous constituents which have not been changed completely into non dangerous constituents could be released into the environment in short, middle or long term.
